# THE RAINBOW ROSE

PLANT PATENT 59

North, South, East and West, under all sorts of growing conditions "Peace" has proved to be a truly glorious rose. Where-ever Roses can be grown "Peace" is

SUPREME

## Dawn-like Colors

We believe that this is the most beautiful Rose ever introduced in America. It has the shimmering iridescence of a Rainbow, compelling the instant admiration of everyone who sees it. Buds of canary yellow with cerise-picotee border slowly open to flowers of immense size and perfect form. The colors change as the flowers unfold—canary yellow, pale gold, cream, ivory, and alabaster white with the cerise edging of the petals passing through soft rose to a true apple blossom pink, and finally to the softest of soft pink lavender.

HERE IS A ROSE THAT COMES NEARER TO BEING A WHOLE ROSE GARDEN IN ITSELF THAN ANY VARIETY IN EXISTENCE

PLANTS are of vigorous, upright growth with extraordinarily heavy canes.

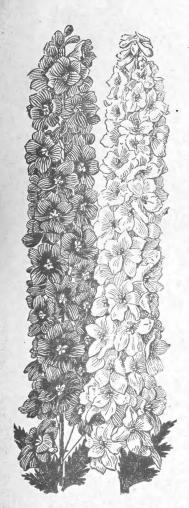

FOLIAGE is shining and holly-like, superior in every way to nine out of any ten Hybrid Tea Roses you have ever grown in your garden or that you are likely to see elsewhere.

BLOOMS are perfect in form, very large and are long lasting when cut. From the opening of the bud to full bloom they have the freshness that characterizes all flowers in the early morning.

THE HIGHEST-SCORING ROSE

HE HISTORY OF ALL-AMERICA ROSE TRIALS

# It's Over! Now What?

WE ARE enjoying the first Peace-time gardening year since Pearl Harbor. Looking back, we feel certain that the Victory Gardening activities of our people represented one of the really great American efforts of the war. Food literally did Fight for Freedom, and had it not been for the astonishing production of our community and home gardens, a very serious food situation would have developed.

In Industry reconversion represents a major problem. It is a problem that every gardener also faces, and if we may be privileged to guide the thinking of our customers in Peace as we did in War, then we urge you to think along the lines of continuing your Victory Gardening. The need for a conservative home production of vegetables still exists; the returns from such production merit your most careful thought, for you have learned that your garden produces something that money cannot buy in the markets—health, happiness, and a justifiable and honest pride that comes from worthwhile accomplishment.

#### Breck's urges a three point plan for 1946 gardening:

- (1). A continuance of vegetable growing on a genuinely selective basis.
- (2). Reconversion of the garden plot, yard beds, or other cult 'rated areas, so that the joys of outdoor living among the flowers can be greater and ever more colorful.
- (3). A return to ornamental gardening which involves the improvement of long neglected lawns, flower beds, shrubbery-borders and hedges.

In this catalog, the pages are filled with a multitude of things that will make your home life richer and happier. One does not have to travel to see the beautiful flowers of the world. These you can have in your own garden; you can grow them yourself. Arouse in your family circle a pride in your garden, an interest in working there, and a joy in playing in it. Carry this garden message out to your neighbors; enter into friendly competition with them in the growing of fruits, vegetables and flowers; create community spirit, and by so doing, help build America back to a peace-time way of living . . . . and thinking.

WE WISH YOU EVERY SUCCESS IN THE COMING YEAR

#### PLEASE READ CAREFULLY - PREPAID and NON-PREPAID DELIVERY

- I. Delivery charges are prepaid in the U. S. A. on all Flower and Vegetable Seeds, Bulbs, Lawn Mixtures, and certain items priced "postpaid."
- 2. In Greater Boston and certain surrounding communities (as indicated on map on page 2), delivery is prepaid on ALL SHIPMENTS OF \$4 OR OVER, exclusive of living plants, whether or not the items are priced as "prepaid."
- 3. Be sure to add postage at zone rates on items marked "not prepaid," unless you indicate that shipment is to go by express or by freight, charges to be collected on arrival. (This applies equally to non-prepaid items to be shipped into the Greater Boston delivery area if the shipment totals LESS than \$4.)
- 4. Delivery is prepaid by Breck's on the dormant Roses and other nursery stock in this catalog (except Blueberries and Strawberries). Nursery stock NOT listed in this catalog is shipped from our plant departments by express collect. All plant material is shipped only to your home address, not to our Boston stores, or to other will-call points.

Grow your own flower and vegetable plants indoors from seed—right on your windowsill. Get a jump on the seasongrow fine, sturdy plants of the hard-tofind varieties. Kit has three waterproof, 51/2 inch flats of green fiber with seedling trays that water from below for nine separate varieties; supply of Mica-Gro, better than soil-for sure start and phenomenal root growth; two packets choice seeds; full directions.

Transplant Boxes
Seedlings which have been grown in "Breck's Seed Starting Kits"

(offered above) become healthy, vigorous plants, ready for the garden, when grown in these 11 inch, waterproof, fit-the-windowsill, transplant boxes. The scientific sub-irrigating plan gives perfect drainage under the soil and controlled watering from below. The individual plant bands which separate the plants encourage maximum root growth.

## Treat Seeds Before Planting

Legume inoculants are cultures of living rootnodule bacteria and Legume-Aid is an outstanding brand name among these inoculants.

Treating seeds before sowing with these bacteria causes nodules to develop on the roots of legume crops. These nodules gather nitrogen from the air and convert it into plant-food.

50505—Legume-aid Garden Packet. A combination position of the product of the pro

bination packet for inoculating Garden Peas, Sweet Peas, Garden Beans, Soybeans and Lupines. Will treat 5 lbs. of seed. Prepaid 10c. Legume-Aid for Alfalfa and Clovers. 1-bu. size, prepaid, 50c.; 2½-bu. size, prepaid, \$1.00 Legume-Aid for Garden and Field Peas, and Vetch. 100-lb. size, prepaid, 50c. Prepaid, pkg. 25c., 2 oz. can \$1.00, 12 ozs. \$5.00

## Soils—Soil Conditioners and Mulches

#### MICA-GRO

Best seed-starting medium we know of. Clean, light in texture and weight, sterilized, treated with the nutrients, vitamins and root-forming hormones necessary to early growth. Mica-Groholds water like a sponge. It requires less frequent watering and minimizes "damping-off." Germination is faster in Mica-Gro and its texture makes treasplanting early and soften. ture makes transplanting easy and safe.

Not prepaid except locally (terms on page 2).

Large pkg., over ½ pk. (Sh. wt. 3 lbs.)....\$0.50

10 lbs., over ½ bu. (Sh. wt., 13 lbs.).....\$195

#### POTTING SOIL

Good quality loam for transplanting seedlings. potting bulbs and repotting plants.

Bu. (Sh. wt., 68 lbs.) \$1.25

Not prepaid except locally (terms on page 2).

#### LEAFMOLD

Best grade sifted leafmold, excellent for mixing with soils that are deficient in organic matter; also used in potting loam mixture.

20 lbs. \$1.00, bag (about 90 lbs.) \$3.75 Not prepaid except locally (terms on page 2).

#### **GREENHOUSE SAND**

Coarse sharp sand for rooting cuttings and

mixing with potting soil.

25 lbs. 60c., 100 lbs. \$2.00

Not prepaid except locally (terms on page 2)

#### ALUMINUM SULPHATE

Used to create an acid condition in the soil for Rhododendrons, Azaleas or other acid loving plants.

Not prepaid except locally (terms on page 2). 51bs. 40c., 10 lbs. 75c., 25 lbs. \$1.25, 100 lbs. \$4.00

#### LAND LIME—For Acid Soils Fine Ground Magnesium Limestone

Used to correct sour or acid conditions in the soil. May be used at any time. Effective, safe and will not burn. 100 lbs. \$1.50 Not prepaid except locally (terms on page 2).

#### HYDRATED LIME

Faster in its action than the above but caustic and unsafe to use at planting time or in the vicinity of growing plants. Should not be used at the same time that fertilizer is applied. Not prepaid except locally (terms on page 2). 10 lbs. 35c., 25 lbs. 60c., 50 lbs. \$1.00

#### FINE HORTICULTURAL PEAT MOSS

One of the best known and most widely used products for conditioning soil and for mulching. Except for old-fashioned barnyard manure, no other product so nearly fills the need for organic matter in soil. The addition of substantial quantities to the garden will add to the soil's ability to hold moisture; will aerate the ground and will so improve the texture of clay soils that they will not form a hard top crust. A full bale will cover 250 square feet approximately 1 inch deep. Not prepaid except locally (terms on page 2). Full Bale (Sh. wt., 145 lbs.) .......\$5.00

#### SANI-SOIL

New protective mulch made from the fibrous bark of the Giant Redwoods. Forms a perfect insulation against heat and cold, yet keeps the soil properly air conditioned and lets moisture seep through so that the earth is constantly moist and friable. Sani-Soil is clean and possesses and friable. Sani-Soli is clean and possesses inherent qualities which repel insects and discourage fungous diseases. An ideal mulch for Roses, Rhododendrons, Evergreens, Strawberries, etc. A 25-lb. bag will cover 30 square feet, approximately 1 inch deep.

Not prepaid except locally (terms on page 2).

25 lbs. \$1.75, 100 lbs. (four 25-lb. bags) \$6.00

#### OR VEGETABLES AND FLOWERS (5-10-10-2)

Here is a new, super-efficient plant food designed for general garden use. With the relaxing of government restrictions and with careful planning and research we have achieved a goal that we have never reached before.

The formula—a sufficient supply of nitrogen to meet the needs of the most exacting crops, balanced with phosphorous and a really high per-

centage of potash for potatoes and other root vegetables, together with another more recently recognized, but no less important element, magnesium, which aids in the formation of fruit and flowers and builds up the rich foliage coloring that only healthy plants possess.

The organic base is a soil builder and adds greatly to the efficiency of

#### G. & O. ROSE FOOD (7-8-5)

An organic fertilizer designed primarily to meet the exacting requirements of our most popular flowering plant. ## Agricultural Seeds, Grains, etc. CLOVERS and FIELD SEEDS

BUCKWHEAT. The largest and best variety. It is grown extensively as an article of food but is also used as a quick growing cover crop for turning in to improve soils. lb. will sow 200 square feet. 1½ bushels to an acre. Not prepaid, 12 lbs. (pk.) \$1.25, 24 lbs. \$2.25, 48 lbs. (bu.) \$4.00

CLOVER, Alsike (Trifolium hybridum). A very hardy perennial Clover valuable as a forage crop and for soil improve-ment Alsike is often sown with Timothy and Red Clover to be used as hay and produces a crop of superior quality. It is very free flowering and attractive to bees. Prepaid, lb. 70c., 5 lbs. \$3.20, 10 lbs. \$4.20, 50 lbs. \$21.50, from 60 to 100 lbs., 41c. per lb.

CLOVER, Bokhara or White Sweet (Melilotus alba). An excellent legume for plowing under as a green manure. If cut before it becomes too coarse, it makes very satisfactory hay. Although not relished by livestock as much as Alfalfa, it will grow on soils much too poor for Alfalfa. Valuable crop for beekeepers; not suitable for lawns. Prepaid, lb. 35c., 5 lbs. \$1.60, 10 lbs. \$3.00, 50 lbs. \$10.75, from 60 to 100 lbs., 19½c. per lb.

CLOVER, Ladino White. A mammoth white Clover from the Pacific Northwest hardy in New England. Valuable in any pasture or for permanent mowing. Not for lawns.

Prepaid, lb. \$3.50, 5 lbs. \$16.50, 10 lbs. \$31.50.

**CLOVER, Medium Red** (Trifolium pratense). This is the common Red Clover and by far the most important variety. It may be sown alone or in combination with various other forage plants. A highly nutritive forage crop and valuable too for plowing under to improve soils. It will grow on a wide variety of soils but will not tolerate poorly drained land. Prepaid, lb. 70c., 5 lbs. \$3.20, 10 lbs. \$1.75, 50 lbs. \$23.00; from 60 to 100 lbs., 44c. per lb.

**CLOVER, Wild White.** A hardy, persistent variety of creeping habit which is excellent in lawn mixtures where Clover is desired. Highly recommended for pasture mixtures. It will stand extremely close cropping, and it blossoms much less than the ordinary White Clover. The leaves are small and blend readily with other grasses to form a thick, dense turf. This type of Clover may eventually supersede the White Dutch. Prepaid, ¼ lb. 65c., lb. \$2.00, 5 lbs. \$9.50, 10 lbs. \$18.00

CLOVER, White Dutch (Trifolium repens). This is the Clover which has been used so widely in lawn grass mixtures. It will grow in a great variety of soils but is most luxuriant on alkaline soils where it receives plenty of moisture. White Clover is also a splendid pasture plant and because of its high nutritive value the hay is very desirable for cattle. Prepaid, 1/4 lb. 65c., lb. \$2.00, 5 lbs. \$9.50, 10 lbs. \$18.00

MILLET, Hungarian (Panicum germaniacum). This variety matures earlier than the Japanese and is of value as one of the quickest catch crops for hay. It has a remarkable resistance to drought and will remain fresh and green when other vegetation is parched. Also used widely as green feed. Sow at the rate of 50 lbs. per acre.

Not prepaid, 5 lbs. \$1.20, 10 lbs. \$2.25, 25 lbs. \$5.25, 100 lbs. \$20.00

MILLET, Japanese (Panicum crus-galli). Distinct from other varieties. An enormous cropper, over 6 feet high, excellent either green or as cured hay. Broadcast at the rate of 25 lbs. per acre; in drills 18 inches apart, sow 15 lbs. to the acre. Weight about 35 lbs. per bushel.

Not prepaid, 5 lbs. 70c., 10 lbs. \$1.35, 25 lbs. \$3.15, 100 lbs. \$12.00

OATS, Breck's King. A variety of splendid vigor, hardiness and productivity. In addition to their value as human food, Oats are the best grain to improve impoverished soils. Sow at the rate of 1 lb. to 100 square feet or 3 bushels to the acre.

Not prepaid, 8 lbs. (pk.) 85c., 16 lbs. \$1.50, 32 lbs. (bu.) \$2.75

RAPE, Dwarf Essex. A broadleaved plant of the Cabbage family which is greatly relished by sheep and hogs. It is widely used as a pasture plant and provides a great amount of forage. Sow broadcast at the rate of 6 to 8 lbs. to the acre.

Not prepaid, lb. 45c., 5 lbs. \$2.15, 10 lbs. \$4.00, 25 lbs. \$9.50 Prices on application in August RYE, Rosen Winter.

RYE, Spring. Rye is raised extensively as a grain for human consumption, but in this section of the country its chief use is for cover crops or for green manure purposes. It is often sown with Vetch to prevent soil erosion and to turn in to improve soils. Sow at the rate of 1 lb. to 100 square feet or 1¼ bushels to the acre.

Not prepaid, 14 lbs. (pk.) \$1.25, 28 lbs. \$2.25, 56 lbs. (bu.) \$4.00

SOYBEANS, Manchu, Yellow Seeded. This variety is particularly desirable in this section of the country for hay, ensilage and also for plowing in to improve the soil. Sow in drills at the rate of 100 lbs. per acre. Not prepaid, 5 lbs. 70c., 10 lbs. \$1.35, 25 lbs. \$3.15, 100 lbs. \$12.00

WHEAT, Marquis Spring. Wheat is, of course, the grain that is most largely used in the manufacture of products for human consumption. It is also of value as a feed for livestock, but in our section of the country it is grown for hay, for its straw which is used for bedding livestock, and for a green manure crop. This variety is a heavy cropping type for Spring planting. The kernel is dark red, hard, and plump. It is beardless, with smooth yellow chaff, and it is particularly valuable because of its earliness. Sow at the rate of 1 lb. to 200 square feet, or 2 bushels to the acre. Not prepaid, 15 lbs. FOR SUNNY LOCATIONS Use one pound to 250 square feet NEW ENGLAND'S MOST FAMOUS QUALITY LAWN SEED

For many years "Boston Park" has been our standard recommendation to those who wish the best in lawn grass seed mixtures and for years its reputation as a quality lawn builder has grown. The experience of five generations of New England seedsmen has been used in the blending of this superb mixture of choice grasses, each of which has survived the test of the most rigorous cold as well as the opposite extremes of Summer weather. "Boston Park" is designed to provide the kind of lawn that everybody wants; one that starts green in the Spring and stays green throughout the season. Guaranteed to contain no crabgrass seed

Due to popular demand no Clover is included in this mixture.

## VEGETABLE PLANTING CHART

In order to simplify the planning of your garden and so that you may have your seed requirements on hand in good season, we have prepared the following vegetable planting table. The dates given must by necessity be approximate for weather conditions vary so from year to year that hard and fast rules in regard to times of planting are impossible. However, unless the season is unusually late they may be followed with reasonable assurance of safety. Our estimates on the number of plants or the length of row that an ounce or a pound of seed will produce, are moderate. In many cases many more plants will result and if great care is taken in handling, the seed will sow a row longer than that specified. In spite of variations such as are mentioned above we believe that you will find this chart helpful.

## BRECK'S VEGETABLE SEEDS

Underlined items are those which we particularly recommend

Asparagus-Mary Washington

### ASPARAGUS

Asparagus is a hardy perennial plant which will bear a satisfactory crop over a 20-year period if the bed is properly established and cared for. We recommend the purchase of ASPARAGUS ROOTS (offered below) rather than seeds for the fussy work of starting, transplanting and selection are thus eliminated and above all, a crop may be harvested at least 2 years earlier.

If seed is used sow it thinly in drills, in the early Spring and cover to a depth of only ½ inch. The resulting plants should be thinned out to stand at least 6 inches apart and when a year old transplant them to carefully prepared and heavily enriched beds.

1 ounce of seed will sow about 60 feet of drill

**5012 Paradise.** A fine new variety that produces a normal crop a year earlier than "Washington," with a heavier yield. Delicious, mild flavored, tender green stalks. Pkt. 25c., oz. \$1.00

5015 Mary Washington. The stalks are dark green with purplish tips. Very large, straight, and of superb quality. Immune to rust.
Pkt. 15c., oz. 50c., ¼ lb. \$1.50

## BEANS

Time to Plant—Seed of most BUSH BEANS may be sown about May 1 with later plantings until about August 1; DWARF SHELL BEANS from May 1 to about June 20 and POLE SNAP BEANS from May 1 to July 5. LIMA BEANS should not be planted before May 15 with later plantings of the Bush varieties until about June 20 and until about June 10 with the Pole varieties.

\*\*Planting\*\*—Plant BUSH BEANS in rows about 2½ feet apart and cover the seed to a depth of about ½ inch. POLE BEANS should be planted in hills with a stout pole, 6 feet or more long in the center of each hill. These hills should be arranged in rows and spaced about 2 feet apart in the row. Leave about 4 feet between the rows to admit plenty of air and light. Two or three plants should be allowed to each pole. 1 pound of BUSH BEANS will sow a row of about 50 feet; 1 lb. of POLE BEANS (except Limas) will plant about 200 hills; and 1 lb. of LIMAS, about 75 hills

#### (all) Green Bush Beans

## CABBAGE

Time to Plant—Early Cabbage may be started indoors or in a coldframe as early as March 15 or in the garden from April 20 until about July 10. Late varieties should be sown during May.

Soil-The soil for Cabbage should be deep, rich and well drained. Wet, sour soils will only cause failure. Seed Sowing—Sow in flats or in sheltered seed beds of finely pulverized loam. Broadcast the seed thinly over the surface and cover lightly (no more than 1/4 inch) with finely sifted soil.

Culture-When the plants are large enough to handle thin out or transplant so that they will be far enough apart to develop properly. Early Cabbage may be transferred to their permanent positions in the garden from late April on. Late Cabbage for Winter use should be set out not later than July 15. In planting out set the plants 18 inches apart (late varieties 24 inches) in rows and allow 2½ feet between rows.

1 ounce of seed should produce about 2000 plants

#### **EARLY VARIETIES**

5421 Chinese Cabbage Chihili

#### CHINESE CABBAGE

Chinese Cabbage thrives best in cool weather and is therefore grown as a Fall crop. However, if an early Spring crop is desired sow the seed in-doors about April 1 and transplant to the garden in late April. Otherwise sow in the open ground during early July in rows, spacing the rows about 2 feet apart. Cover the seed with not more than 1/4 inch of soil. When the plants are 2 or 3 inches tall, thin out or transplant to about 18 inches apart

1 ounce of seed should produce about 5000 plants

5421 Chihili. 75 days. A tall and slender variety which resembles Cos Lettuce. The midribs are large and the heads cylindrical. 14 to 18 inches in height.

Pkt. 10c., ½ oz. 40c., oz. 75c., ¼ lb. \$2.25

#### CHIVES

Chives seeds may be sown outdoors from about April 20 until early July. Sow thinly in rows, spaced about 18 inches apart. The resulting plants should be thinned out or transplanted to stand about I foot apart. Chives are perfectly hardy and may remain in the garden throughout the Winter or the plants may be lifted and planted in pots or boxes for growing indoors during the Winter for a constant supply of this most desirable flavoring plant.

1 ounce of seed will sow a 200-foot row

**5461 Chives.** For flavoring soups or salads. Pkt. 25c., ½ oz. 60c., oz. \$1.00

# Cauliflower

Time to Plant—Sow the seed indoors or in a coldframe about March 15 or in the garden from about May 1 to June 15.

Soil—A deep, rich, well drained soil is the ideal type for Cauliflower. Wet, sour soils are unsatisfactory.

Seed Sowing—Sow in flats or sheltered seed beds of finely pulverized loam. Broadcast the seed thinly over the surface and cover lightly (no more than ½ inch) with finely sifted soil.

Culture—When the plants are large enough to handle thin out or transplant far enough apart so that they may develop properly. The plants may be transferred to positions in the garden from about May 1 until early July. Set them in rows with about 18 inches between plants and 2½ feet between rows. Be sure that Cauliflower is well watered in periods of drought. Examine the plants frequently and as soon as heads develop to 3 or 4 inches in diameter either tie or break the leaves over them to exclude all possible light.

1 ounce of seed should produce about 2000 plants

5502 Breck's White Bouquet. 55 days. We believe this to be the finest Cauliflower in existence. The plants are short-stemmed with small leaves, producing medium to large close-grained snowy-white heads of superb quality. Admirable for New England growing.

Pkt. 25c., ½ oz. \$1.00, ½ oz. \$1.75, ½ oz. \$3.00

**5506 Early Snowball.** 55 days. A fine strain of this splendid variety. The plants are dwarf. The heads splendid variety. The plants are dwarf. The heads grow five to six inches and more in diameter and are smooth and compact. One of the most satisfactory varieties. Pkt. 25c.,  $\frac{1}{8}$  oz. \$1.00,  $\frac{1}{4}$  oz. \$1.75,  $\frac{1}{2}$  oz. \$3.00

## CARROTS

Sow the seed in the open ground just as early in the Spring as the ground is workable (about April 20) and make successive plantings at intervals until about August 1. Sow thinly in rows and cover with not over ¼ inch of soil. Allow about 1½ feet between rows. Thin out the plants to stand at least 2 inches apart.

1 ounce of seed will sow a 100-foot row

5525 Breck's Golden Beauty. 70 days. The sweetest and most delicately flavored Carrot we have ever offered. The flesh is of fine texture and color. We recommend this coreless variety unreservedly for the home garden as a Carrot of outstanding merit.

5603 Easy Blanching Celery

## CELERY

For the early crop seed should be sown in a greenhouse during March, in flats. The late or main crop should be sown in a coldframe or even in a sheltered seed bed out of doors, in late April or during May.

Broadcast the seed thinly over the surface of the soil and cover very lightly (no more than 1/16 inch) with finely sifted soil. As soon as the plants are large enough to handle thin out so that they are an inch or two apart. The early plants should be transplanted to permanent positions in the garden in May and the late crop in late June or July. Set the plants about 8 inches apart, in rows and allow at least  $2\frac{1}{2}$  feet between rows. Celery should have a deep, rich, fertile soil which is well-drained. It should have an abundance of moisture.

1 ounce of seed should produce 3000 plants

Cropping dates of Celery are figured from the time the small plants are set out in the garden or field

## **CUCUMBERS**

Time to Plant-Do not sow outdoors until the weather has become settled

Time to Plant—Do not sow outdoors until the weather has become settled and warm, during June.

Soil Preparation—Cucumbers prefer a rich, porous soil and we suggest digging in a generous shovelful of well rotted manure when preparing each hill.

Planting—Sow in hills (7 or 8 seeds to each hill) spaced about 4 feet apart in each direction. Cover with not more than ½ inch of soil. When the plants are 2 or 3 inches high, thin out to leave only 3 or 4 plants to each hill.

An abundance of moisture is always needed.

One ounce of seed should plant about 60 hills

## SWEET CORN

Time to Plant—Sweet Corn is a rather tender plant and therefore seed should not usually be planted until about May I and then only if the weather is settled and reasonably warm. Plantings may be made at intervals, from that time until about July I using early varieties for the later sowings.

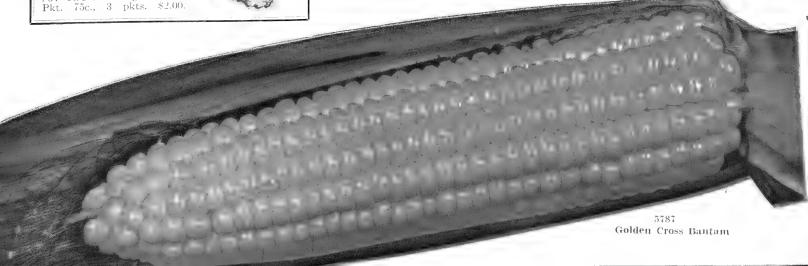

Seed Sowing—In the home garden it is best to sow Corn in rows which should be spaced about 3 feet apart. The seed should be sown very thinly; covered to a depth of one inch and the resulting plants thinned to stand about one foot apart. In larger field plantings the usual practice is to plant in hills spaced at least 3 feet apart each way. Four or five plants are allowed to each hill.

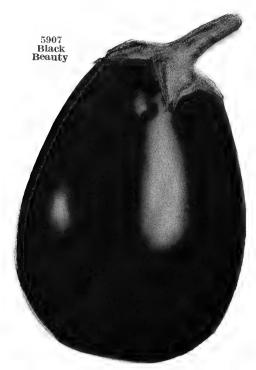

1 pound of Corn should plant a 200 foot row

#### EGGPLANTS

Eggplant is one of the most tender vegetables and cannot stand outdoor conditions during early Spring. The seeds should be sown about the end of March in a greenhouse or hotbed. Broadcast the seeds over the surface of flats filled with well pulverized soil of good quality and cover with no more than ½ inch of finely sifted loam. As soon as the seedlings are large enough to handle thin out or transplant so that they stand 6 to 8 inches apart. When outdoor conditions become settled and warm (from about June 5 to 15) the plants should be set in the garden spaced about 3 feet apart.

# HERBS for Havor and H

8123 Anise (Annual). A nice appearing plant with finely divided foliage somewhat resembling Fennel. The tiny yellowish white flowers borne in lacy umbels, appear about 3 months after seed is sown and the seeds are ready for harvesting about one month later. These seeds are used for flavoring many foods such as soups, salads or breads, and also produce an oil which is used in cough medicines.

Pkt. 15c., 3 pkts. 35c.

8145 Sweet Basil (Treat as Annual). An easily grown and popular culinary herb; a branching plant which bears whorls of greenish white flowers well above the smooth green leaves. The leaves are delightfully Clove-scented and may be used either fresh or dried for seasoning soups, salads and cottage cheese; also in chopped meats and sausages. Basil has been in use for over 1000 years. Pkt. 15c., 3 pkts. 35c.

8156 Borage (Annual). Pretty sky-blue flowers in clusters on branching plants with somewhat rough, hairy foliage. The young leaves, before the plants bloom, may be cooked like Spinach and the fresh foliage which has a Cucumber flavor adds a cooling touch to salads.

8167 Caraway (Hardy Biennial). Caraway is an attractive plant with feathery green leaves and umbels of yellowish white flowers. It is valuable because the foliage may be used in soups and salads; the roots boiled and eaten as a vegetable and the seeds are popular for flavoring. Pkt. 15c., 3 pkts. 35c.

8189 Coriander (Annual). A slender branching plant which bears rose-tinted blooms which resemble "Queen Anne's Lace." Coriander is grown for its seeds which when ripe have a pleasant, pungent flavor and are used in flavoring cookies, cakes, poultry stuffings, sausages and confectionery. Sow where the plants are to grow; transplanting is difficult.

8191 Dill (Annual). Fine cut, feathery foliage and umbels of greenish yellow flowers. An aromatic oil from the seeds is used in soaps and perfumes; the foliage flavors meat gravy, cottage cheese or potato salad and the seeds are used in pickles. Dill dislikes transplanting; sow where the plants are to grow. Pkt. 10c., 3 pkts. 25c.

8224 Horehound (Perennial). An old-time sweet herb the name of which is only known to many from its use in cough medicines and hard candy. Horehound is an aromatic plant with wooly white foliage and bristly whorls of white flowers, in Summer. The dried leaves are the useful part.

Pkt. 25c., 3 pkts. 60c.

8246 Lavender (Perennial). While Lavender is a perennial, it is best to give the plants Winter protection. It is strongly aromatic and very ornamental being much used in borders and rock gardens. The flowers are lavender and the foliage gray. Grown also for its aromatic oil which is well known in perfumes.

Pkt. 25c., 3 pkts. 60c.

8257 Marjoram, Sweet (Treat as Annual). A perennial plant but best treated as an annual because it is not reliably hardy. Small but erect, bearing close heads of purplish blooms. The deliciously fragrant foliage is popular for scent bags and in powders, and the fresh leaves are much used in salads. Dried they may be used for seasoning meats, poultry or cheeses. Pkt. 25c., 3 pkts. 60c. 8318 Sage (Hardy Perennial). A purple-flowered substrub with woolly whitish foliage. The fresh leaves may be chopped and used for flavoring sausage, cottage cheese or pickles. Dried and powdered they are used for sprinkling on roasted meats, in poultry

tage cheese or pickles. Dried and powdered they are used for sprinkling on roasted meats, in poultry stuffings and with certain cooked vegetables.

Pkt. 25c., 3 pkts. 60c.

8329 Savory, Summer (Annual). A fragrant little plant with slender leaves and pale lilac flowers. About flowering time the entire plant is cut and dried and the leaves are then used for flavoring salads, meats, stuffings and cooked vegetables.

Pkt. 15c., 3 pkts. 35c.

8367 Thyme (Hardy Perennial). An erect little shrubby plant with small, grayish green leaves closely set on small, wiry stems, and lavender flowers. Used for ornamental purposes in borders or rock gardens. The fresh tops are often used for garnishing and the leaves either dried or fresh, are chopped and used for flavoring a wide variety of cooked foods.

Pkt. 25c., 3 pkts. 60c.

# Lettuce

Time to Sow—If a very early crop is desired, seed may be sown about March 15 indoors in flats or in a coldframe; outdoors sowings may be made as early as April 1 and successively until about June 1. As Lettuce prefers cool growing weather it is best to discontinue sowings during the tot Summer months except for certain varieties. A Fall crop may be sown from August 1 to August 15.

Soil—Indoor sowings should be made in finely prepared loam. Any well-drained and enriched garden soil will suffice for outdoor plantings.

Planting—Sow the seeds outdoors in rows 2 feet apart and cover with not over \( \frac{1}{2} \) inch of soil. When the plants are large enough to handle thin out and use or transplant to other rows, allowing I foot between plants. I ounce of seed should produce about 3000 plants

## PEPPERS

Time o Plant—For an early crop the seed may be sown either in the house or in a coldframe in early April. However, seed sown from May 15 to June 1 in the open ground will produce a crop in late Summer.

Seed Sowing-Sow the seeds thinly in flats or in a coldframe in light pulverized soil. Cover

Seed Sowing—Sow the seeds thinly in flats or in a coldinate in light pulverized some them with not over \( \frac{1}{2} \) inch of soil.

Soil Preparation—Any reasonably good, well cultivated garden soil, preferably ground that has been manured the previous year. Soil too rich in nitrogen will tend toward the production of foliage rather than fruit.

Transplanting—Seedlings started inside, should be transplanted as soon as they are large enough to handle, into boxes or individual pots and spaced far enough apart so that each will have ample space for development. These plants should be gradually hardened off by exposure to out-of-door conditions during favorable weather, before being permanently placed in the garden, about June 1. Set the plants 1\( \frac{1}{2} \) feet apart in rows leaving about 3 feet between the rows.

## **PARSLEY**

The seed may be sown from April 20 to about June 25 out of doors but if earlier plants are desired they should be started indoors or in a coldframe about March15 and transferred to the open garden about May 1. The seeds germinate slowly, and care should be taken to press the soil firmly around them. Sow in rows 11/2 feet apart and cover the seed not more than 1/4 inch. When large enough to handle, thin out to 2 inches apart. Any reasonably good garden soil will suffice.

1 ounce of seed will sow 150 feet

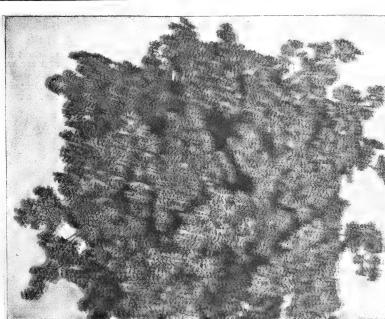

Rich, dark green leaves, densely curled. The most deisrable sort for exhibition or garnishing Highly prized for garden borders, frames, or open ground.

Pkt. 25c., ½ oz. 60c., oz. \$1.00, ¼ lb. \$3.00

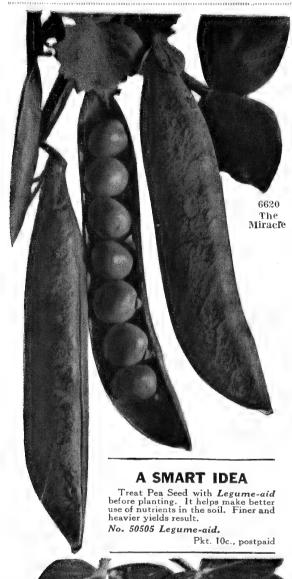

6483 Champion Moss Curled. 70 days. This variety is widely used for borders and it will prove satisfactory in every way for the home garden. Leaves beautifully curled. Extra fine for garnishing.

Pkt. 10c., oz. 30c., ¼ lb. 90c.

6489 Plain-Leaved. 85 days. The favorite for flavoring soups and for drying because of its flat, deeply cut, but not curled dark green leaves. Pkt. 10c., oz. 30c., 1/4 lb. 90c.

6476 Double Green Crest Parsley

## **GARDEN PEAS**

Time to Plant-Just as early in the Spring as the soil is workable (about April 1).

Soil Preparation—Any good garden soil which has been deeply spaded and liberally manured. Peas dislike acid soil and if such a condition exists, it should be corrected by working in lime (about 5 lbs. to each 100 square feet).

Planting—Sow in drills, allowing one inch between seeds and about 3 feet between rows. Cover the seed with about one inch of soil.

Cultivation—As soon as they begin to grow, some form of support should be provided for all but the very dwarf varieties. (Birch brush or poultry wire.) Constant cultivation will add considerably to the quality of the crop.

1 lb. of seed will sow about a 50 foot row

## Certified Potatoes

Aroostook Potatoes, certified as seed stock by the Maine Department of Agriculture.

Potatoes should be planted during April or early May. They will thrive in almost any fertile, well-drained, somewhat acid soil. Do not use lime. The soil should be plowed or deeply dug over and furrows 6 inches deep and  $2^{+}$ 5 to 3 feet apart, should be made. A commercial fertilizer with high phosphorus and potash content should be thoroughly mixed with the soil at the bottom of the furrow (about 20 lbs. per 100 ft. row) and about 2 inches of unfertilized topsoil should be placed over it.

Cut each Potato into three or more pieces with at least one good eye to the piece. Treat with Semesan-Bel and plant, about 10 inches apart, in the prepared furrows. Cover with 3 or 4 inches of soil. Cultivate constantly throughout the season. (10 bushels are sufficient to plant one acre)

7043 New Zealand Spinach

# pinach

Time to Sow—For an early crop seed should be sown just as soon as the ground can be worked (about April 1) with successive sowings up to the end of May. This crop runs quickly to seed in hot, dry weather and therefore it is best not to plant again until about August 15 when a Fall crop of Spinach can be sown which will provide greens until frost.

Soil Preparation—Spinach, to be succulent and tender must have a really rich soil, well prepared and liberally manured.

Planting—Sow the seed thinly in rows; cover with not over ½ inch of soil and allow 1½ feet between rows. When the plants are large enough to handle, thin out, leaving about one inch between plants.

1 ounce of seed should sow a 50-foot row

**7049 King of Denmark.** 48 days. Of Danish origin, and a selection from the best types of Long-standing varieties. Will remain in good condition for cutting for about two weeks after other varieties Pkt. 10c., oz. 25c., 1/4 lb. 70c., lb. \$2.00 have bolted to seed.

**7061 Bloomsdale Long Standing Savoy.** 45 days. Valuable for either Spring or Fall sowing and a variety that is to be recommended in every way. Quality of the best. #### 7043 NEW ZEALAND SPINACH

A true cut-and-come-again vegetable, exceptionally valuable for Summer "greens." The plants are robust, of low spreading habit, extremely drought resistant and produce an abundance of small, thick, tender leaves. As this is not a true Spinach, the culture is somewhat different. The seeds may be sown from May 1 to July 1 and should be soaked in warm water a few hours before planting. Sow at a depth of ½ inch and thin out to stand 2 feet apart. Pkt. 15c., ½ oz. 45c., oz. 75c., ¼ lb. \$2.25

# Squash

There are two distinct types, the Summer or bush type and Winter or vine type. Time to Plant—Sow the seeds of Summer Squash from May I to July I and Winter Squash from May I to June I.

Soil Preparation—Prepare the hills by spading in two or three shovelfuls of well-rotted manure to each hill. If this is not available, work in about a handful of commercial fertilizer to each hill.

Planting—It is best to sow from 6 to 8 seeds in each hill about 12 inch deep. When these are well up, thin out, leaving only 2 or 3 of the strongest plants to grow in each hill. For Summer Squash allow about 4 feet each way between the hills and 7 feet each way for Winter varieties.

1 ounce Summer Squash will plant about 50 hills 1 ounce Winter Squash will plant about 15 hills

## TOMATO

Time to Sow—It is best to sow indoors in flats, or in coldframes, during April, but seed sown outdoors in early May will produce fruit in September.

\*Planting—When sowing use a good light sifted loam and broadcast the seed thinly over the surface, cover with not more than ½ inch of soil. When the seedlings are from 2 to 3 inches high they should be given ample space for proper growth. Either transplant or thin out so that they will be about 3 inches apart. After all danger of frost is past these plants should be hardened off, by gradual exposure to the out-of-doors, during favorable weather; transplanting them to the garden about May 20th. Space the plants about 3 feet apart in the rows allowing 4 feet between rows. Closer planting is possible if the plants are to be staked.

One ounce of seed should produce about 1500 plants

TURNIPS and RUTA-BAGAS

Turnips are easy to grow. They will thrive in the Spring or Fall but will not do well during the heat of Summer. Seeds may be sown as early as the ground is workable (about April 1) with successive sowings until May 15. The Fall crop should be sown in August. Any reasonably good garden soil will suffice.

Sow in rows, 1½ feet apart and cover the seed with not over ½ inch of soil. When the plants are about 3 inches high, thin them out to stand 3 inches apart. These tender vitamin-rich plants should not be discarded, they make delicious greens.

1 ounce of seed should sow a 150-foot row

**7314 Early Snowball.** 42 days. Very fine firstearly variety, producing a small, globe-shaped root, free of all coarseness, and pure white. Recommended to the home gardener because of its superior quality.

best of the flat Turnips. Pkt. 10c., oz. 20c., 1/4 lb. 50c.

7389 Seven-Top. 30-35 days. Cultivated for the tops only. Cut for salads and greens, also for stock-feed. Pkt. 10c., oz. 15c., ¼ lb. 25c.

7394 Yellow Aberdeen. 70-80 days. Very hardy and productive. Good for stock and table. Keeps well.

Pkt. 10c., oz. 15c., 14 lb. 35c.

7402 Golden Ball. 60-65 days. A small, early, medium-sized golden yellow variety with flesh of the finest texture. Unsurpassed for table use. Pkt. 10c., oz. 20c., ¼ 1b. 50c.

#### **RUTA-BAGAS**

An important Fall crop for the roots can be stored throughout the Winter.

Seeds may be sown during April, but since they do not do well during hot weather, it is best not to make further plantings until after June 15, when an Autumn crop may be sown. Their cultural requirements are like Turnips except that they must be thinned to stand 6 inches apart stand 6 inches apart.

1 ounce of seed should sow a 150-foot row

## TAMPALA

#### 7079—A NEW VEGETABLE BETTER THAN SPINACH Tampala is a delicious green vegetable which is cooked and served like Spinach. The entire plant may

be used when it is 5 or 6 inches high or it may be allowed to develop into a plant of about 2 feet in height. If allowed to develop the leaves may be removed individually. The stems up to the size of one's little finger are excellent too, but they should be separated from the leaves and cooked 8 or 10 minutes longer as you would cook Asparagus. Tampala should be sown outdoors from early May until Midsuminer. Sow thinly in rows and cover the seed with not over ¼ inch of soil. If the plants are to be used when small, thin out to 2 inches apart; or 12 inches apart if they are to develop fully.

## WATERMELONS

Time to Sow-Outdoors after the weather has become settled and warm (during June). Soil-Light, well-drained soil that has been thoroughly manured.

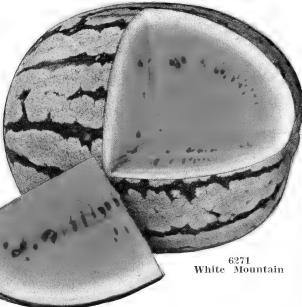

**Planting**—Melons should be sown in hills spaced about 8 feet apart, each way. Sow 5 to 10 seeds in each and cover with not more than one inch of soil. When well started thin out so that 3 or 4 of the strongest plants hill and cover with not more than one inch of soil. remain in each hill.

1 ounce of seed will plant about 30 hills

6271 White Mountain. 65 days. A superb new, very early Watermelon. Grows only 7 or 8 inches long—small enough to fit conveniently in the refrigerator—with delicious rich red flesh and practically no rind. The sweetest, juiciest Watermelon you have ever been tempted with. An ideal variety that merits a place in every home garden. Pkts. only, 25c. garden.

6284 Harris' Earliest. 80 days. has long been the standard in New England. Fruits are broad, oval and weigh from 15 to 20 lbs. The rind is thin and tender and the flesh is bright red, sweet and of good quality.
Pkt. 10c., oz. 20c., ½ lb. 50c.

6288 Citron. 90 days. This small, round Melon is inedible in the raw state but is highly recommended for preserving. The skin is alternately striped light and dark green and is very hard; the flesh is white and very firm. Pkt. 10c., oz. 20c., 1/4 lb. 50c.

#### PLEASE READ CAREFULLY - PREPAID and NON-PREPAID DELIVERY

- I. Delivery charges are prepaid in the U. S. A. on all Flower and Vegetable Seeds, Bulbs, Lawn Mixtures, and certain items priced "postpaid."
- 2. In Greater Boston and certain surrounding communities (as indicated on map on page 2), delivery is prepaid on ALL SHIPMENTS OF \$4 OR OVER, exclusive of living plants, whether or not the items are priced as "prepaid."
- 3. Be sure to add postage at zone rates on items marked "not prepaid," unless you indicate that shipment is to go by express or by freight, charges to be collected on arrival. (This applies equally to non-prepaid items to be shipped into the Greater Boston delivery area if the shipment totals LESS than \$4.)
- 4. Delivery is prepaid by Breck's on the dormant Roses and other nursery stock in this catalog (except Blueberries and Strawberries). Nursery stock NOT listed in this catalog is shipped from our plant departments by express collect. All plant material is shipped only to your home address, not to our Boston stores, or to other will-call points.

#### **BALDWIN SPRINKLERS**

For homes, estates and golf clubs. A Baldwin Sprinkler will outperform others costing twice as much because there is nothing on the interior to interrupt the flow of water. All working parts are on the outside, always accessible and foolproof, and the oscillator arm breaks up the water stream. All brass head with heavy pipe base.

#### "GARDEN CLUB" HOSE

A light, strong flexible hose, made of new "Buna" rubber reinforced with a single-ply "circle-lock" cord woven in such a way that the hose is exceptionally flexible even when under pressure.

Not prepaid except in local delivery area. 50 ft. lengths, 5% in. (Sh. wt. 10 lbs.) \$6.75

#### **MENDERS** and COUPLINGS

Hose Menders, Clincher. Brass tube with steel fingers. Easily and securely attached. For ½-, ¾-, and ¾-in. hose. Prepaid, each 10c. Hose Couplings, Clincher. Heavy brass with plated steel fingers. Easily attached with a hammer. For ½-, ¾-, and ¾-in. hose. Prepaid, per set 25c.

#### **HOSE WASHERS**

Rubber, tough and springy. Will not harden, shrink or fall out of coupling. Fit any hose. Prepaid, per doz. 10c.

#### **BOSTON HOSE NOZZLE**

Solid cast brass, extra heavy. Adjustable for

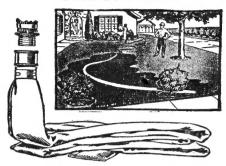

spray or full stream. Positive shut-off. Fits standard garden hose connection.

(Sh. wt. 1 lb.) 75c.

Not prepaid except locally (terms on page 2).

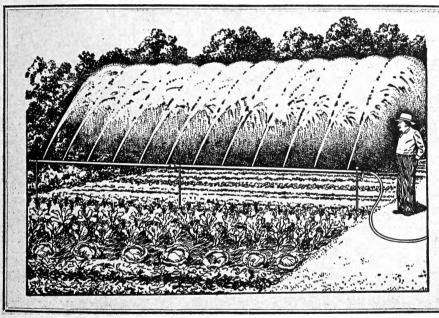

#### SOIL SOAKERS

#### SOAKS LIKE AN ALL-NIGHT RAIN

A simple device employing a new method of flower bed and garden irrigation. It puts water just where water is needed—right in the soil at the plant roots. The Soil Soaker is made of porous canvas. Attached to a garden hose it fills up and under normal pressure, water seeps through every pore of its entire length, soaking directly into the soil.

Not prepai	d except loc	cally (terms	on	page	2).

#### SKINNER PORTABLE WATERING LINE FOR HOME GARDENS

At last the famous Skinner System, used by professional gardeners for 30 years, is available to you. The simplest device you've ever seen. No moving parts—cannot possible get out of order. It will serve you for a lifetime. Works on ordinary house pressure—just fasten to garden hose. Its gentle spray (like a soft Summer shower) is wonderful for watering either vegetables or flowers.

Lightweight—easily and quickly moved from one part of your garden to another. In one location you get complete coverage of 50x21 ft. area simply by swinging handle to direct sprays straight up—to either side . . . or wherever you want.

Made of galvanized steel and brass.

The demand exceeded our supply last year. Please order early to avoid disappointment.

# Breck's BOSTON PARK Lawn Seed Mixture

NEW ENGLAND'S MOST FAMOUS QUALITY LAWN SEED

A superb blending of choice grasses chosen for their fine, even texture and their rich, green color; thoroughly tested for their ability to withstand the extremes of Summer heat and drought, and the cold of Winter. **Boston Park** provides just the kind of lawn everyone wants, one that starts green in the Spring and stays green all season.

# NEW—A new and completely different formula (8–6–2) based on the most recent and painstaking research. SUPER-NOURISHING—Higher nitrogen content than other popular brands with major elements in ample proportions for healthy, vigorous growth—magnesium added for deeper, richer turf coloring. No acid reaction. NO WASTE—The organic base possesses soil-building properties for the permanent improvement of the ground and no useless filler is included. ECONOMICAL—Turf-gro goes further—100 lbs. will feed as much as 5000 sq. ft. of lawn area—your dollar covers more ground. 100-lb. bag feeds up to 5000 sq. ft. of lawn area for only \$4.95 50-lb. bag. \$2.95 25-lb. bag. \$1.75 Not prepaid except locally, subject to conditions on page 2

# Shady Spot Lawn Mixture

Breck's Shady Spot Lawn Seed blends perfectly with "Boston Park." Use it, in those shady nooks, under trees and shrubs and on the shady sides of buildings where grass is difficult to grow.
